SUMMARY

Automation and AI engineer with nearly 4 years building production SaaS: UiPath automation and AI agents that turn multi-hour manual workflows into exception-only processes, plus the full-stack TypeScript, Node and Java/Spring Boot apps around them. Founder mindset: built truckWhat solo (web + mobile), co-founded SmartFit Metrics (live on the App Store and Google Play) and built PrismShift, a Blue Prism to UiPath migration platform. Ships end to end, from design through testing, security review, deployment and production support. Winner (team), Best use of AWS AI, MCP - AWS - Enterprise Agents Challenge, San Francisco (2025).

SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL, Go and PHP (project work)
Automation & AI: UiPath (Studio, Orchestrator, REFramework, Maestro, Action Center, Document Understanding), Blue Prism, AI agents, OpenAI APIs, MCP, LangChain, Claude Code (daily)
Backend & APIs: Node.js, Express, Bun/Hono, Spring Boot, Spring Data JPA/Hibernate, Prisma, REST API design, webhooks, JWT and API-key authentication
Front End & Mobile: React, Next.js, React Native/Expo, TailwindCSS, accessible responsive UI
Databases: MySQL, PostgreSQL, Supabase, MongoDB
Cloud & DevOps: AWS (Elastic Beanstalk, S3, Lambda, RDS, SES, SNS, Bedrock), Azure, Docker, GitHub Actions CI/CD, Vercel
Quality & Security: Vitest, Jest, pgTAP, Postman, code review, security review, AES-256-GCM encryption, row-level security, root cause analysis

EXPERIENCE

HumanixOS (formerly 501Database) | Software Engineer | Jan 2023 – Present | Providence, RI

- Build AI and automation features for a live multi-tenant nonprofit platform (JavaScript/TypeScript), serving 30+ nonprofit tenants and 200+ active users.
- Migrated customer data from legacy databases, CSV files and Excel sheets onto the platform, using AI-assisted CSV column auto-mapping for imports of 5,000+ records per file and cutting manual mapping effort by 80%.
- Built an unattended UiPath import bot (REFramework dispatcher/performer, chunked uploads, retries, exception reports) that reduced a 3-hour manual process per cycle to zero-touch.
- Automated nonprofit verification against IRS Pub 78 and Business Master File data with human-in-the-loop review in Action Center, cutting approval turnaround from 5 days to under 2 hours; built a form-triage bot with fuzzy-match deduplication that reached 85% straight-through processing.
- Helped design and build the original Java/Spring Boot backend (one of four developers): 17 REST controllers, 100+ endpoints, an 8-role JWT/API-key security model and per-tenant MySQL schemas, deployed on AWS (Elastic Beanstalk, SES, SNS).
- Automated tenant provisioning through orchestrated REST API sequences, cutting multi-hour onboarding to under 30 minutes; own the full SDLC from PDD/SDD design documents and peer code review through UAT, go-live and production support.

SmartFit Metrics (formerly Iron Clad Fitness) | Co-founder and Engineer (equity) | May 2025 – Jan 2026 | Providence, RI

- One of two engineers who built the entire gym membership product: React Native/Expo app and Bun/Hono API with Stripe membership checkout; shipped to the Apple App Store and Google Play.

PROJECTS

truckWhat: logistics marketplace (web + mobile, founder, solo) | Next.js, TypeScript, Prisma, PostgreSQL, Supabase, Stripe Connect, Plaid, React Native, GitHub Actions

- Built a web and mobile trucking marketplace (730+ commits) with live tracking, an offline GPS outbox, identity face-match checks and a 3D load viewer, backed by 800+ Vitest and 350+ Jest automated tests on every push in GitHub Actions CI.
- Integrated Stripe Connect payments and Plaid bank linking with a webhook handler for 12+ event types; built in-house error monitoring and alerting.

- Ran a security review and closed 28 findings; wrote 200+ row-level security policies and encrypted bank tokens with AES-256-GCM; removed N+1 queries and batched 500 round trips into bulk writes.

PrismShift: Migration Platform for Regulated Banking (solo) | TypeScript, React, Supabase, Vitest, pgTAP

- Built a platform that migrates Blue Prism workflows into UiPath without recoding them by hand, with tenant isolation proven by 75 pgTAP tests in CI, an immutable audit trail and an infosec approval pack for bank reviewers.

Agentic Loan Intake (UiPath Maestro, solo, in progress) | BPMN agents, Integration Service, Action Center

- Building a Gmail-triggered intake flow where a router agent sorts loan and mortgage documents at 0.75 confidence, extractor agents pull 24 loan fields and about 55 mortgage fields, and compliance and deterministic risk-scoring steps feed 7 work queues.

yconic: AI Startup Evaluation Platform (team) | OpenAI APIs, Node.js, LangChain, MCP

- Built agents that give each startup a uniqueness score, a sentiment score and written feedback.

CFO agent, MCP - AWS - Enterprise Agents Challenge (team, San Francisco, 2025) | AWS Bedrock, MongoDB | Winner, Best use of AWS AI; Top 5 Overall

- Built with a three-person yconic team at the AWS Builder Loft.

LEADERSHIP & COMMUNITY

- **Assistant Coordinator, TEDxProvidence 2025:** core team member who helped plan and run the event.
- **Hackathons:** co-hosted the Red Day hackathon at Bryant University two years running; mentor at hackathons and community coding events; built the AI avatar that gave the keynote at Bryant's IDEA event.
- **Manager, Supreme Cuts** (Providence, Aug 2012 – Mar 2020): recruited and managed barbers and client relationships; kept the books (transaction records, inventory, appointments) in Excel.
- Bilingual: English and Spanish.

EDUCATION

University of Rhode Island | Kingston, RI | B.S. Business Administration, Accounting, Cum Laude, GPA 3.4
DevAccelerator | Providence, RI | Certificate in Computer Science (9-month program) | Jan 2023 – Sep 2023

- Proven Skill Certificates: UiPath, SQL, XML, JavaScript, React
